

MCAD/MCSD Training Guide (70-316): Developing and Implementing Windows-based Applications with Visual C#.NET and Visual Studio .NET

by Amit Kalani

<http://www.techcontent.com>

Index of Step by Step Exercises

Step By Step #	Description	Page #
1.1	Creating a Windows Form	34
1.2	Using the Solution Explorer to See Hidden Files	42
1.3	Using Application Class Properties	44
1.4	Working with Windows Form Properties	49
1.5	Setting Windows Form Properties Programmatically	52
1.6	Invoking Methods of Windows Forms	54
1.7	Adding New Properties to a Windows Form	57
1.8	Using Visual Inheritance	61
1.9	Handling the MouseDown Event	65
1.10	Attaching Multiple Event Handlers to the MouseDown Event	69
1.11	Handling Events by Overriding the OnMouseDown Event	71
1.12	Mixing the Two Event Handling Schemes	74
1.13	Drawing Text on a Form	79
1.14	Using the Invalidate() Method	81
1.15	Using the ResizeRedraw Property	82
1.16	Drawing Text on a Form	83
1.17	Using the Draw Methods of the Graphics Class	87
1.18	Using the Fill Methods of the Graphics Class	90
1.19	Using Different Brush Types	92
1.20	Creating and Rendering Images	95
2.1	Adding Controls to a Windows Form by Using the Windows Forms Designer	118
2.2	Adding Controls to a Windows Form Programmatically	119
2.3	Configuring the Order of Tabs	126
2.4	Programming Control Events	127
2.5	Using Common Dialog Boxes	136
2.6	Creating a Custom Dialog Box	139
2.7	Using LinkLabel Controls	144
2.8	Using GroupBox and Panel Controls	150
2.9	Using CheckBox and RadioButton Controls	153
2.10	Using ListBox and CheckedListBox Controls	157

2.11	Using ComboBox Controls	161
2.12	Using DomainUpDown and NumericUpDown Controls	167
2.13	Using MonthCalendar and DateTimePicker Controls	170
2.14	Using TreeView and ListView Controls	174
2.15	Using Timer, TrackBar, and ProgressBar Controls	179
2.16	Using HScrollBar and VScrollBar Controls	181
2.17	Using TabControl Controls	184
2.18	Creating a Main Menu for a Form	190
2.19	Creating a Context Menu for a Form	198
2.20	Creating a Status Bar for a Form	204
2.21	Creating a Toolbar for a Form	208
2.22	Creating an MDI Application	212
3.1	Exceptions in Windows Applications	232
3.2	Handling Exceptions	236
3.3	Using the finally Block	241
3.4	Creating and Using a Custom Exception	245
3.5	Logging Unhandled Exceptions in the Windows Event Log	252
3.6	Using the ErrorProvider Component and Other Validation Techniques	261
4.1	Creating Components by Extending the UserControl Class	289
4.2	Hosting the ColorMixer Control in a Windows Application	291
4.3	Creating a User Control That Publishes Events	297
4.4	Creating a Windows Application That Subscribes to Events	298
4.5	Extending a Control by Using Visual Inheritance	305
4.6	Creating a Windows Application That Hosts an Inherited Control	307
4.7	Hosting a Windows Control Inside Internet Explorer	310
4.8	Creating a Control That Renders Its Own User Interface	312
4.9	Creating a Windows Application That Hosts the DigitalClock Control	314
4.10	Creating a RandomNumberGenerator Component	315
4.11	Creating a Windows Application That Uses the RandomNumberGenerator Component	319
4.12	Viewing Assembly Contents	324
4.13	Creating a Multifile Assembly	326
4.14	Creating a Windows Application That Uses a Multifile Assembly	328
4.15	Viewing the Contents of the GAC	332
4.16	Creating Resource Files	335
4.17	Creating Resource-Only Assemblies	337
4.18	Using Resource-Only Assemblies	338
4.19	Generating Culture-Specific Satellite Assemblies	339
5.1	Using Simple Data Binding to Display a Vendor Name	356
5.2	Using Simple Data Binding with a Strongly Typed IList	358
5.3	Scrolling Through Data, Using the BindingContext Object	360
5.4	Binding Data to a DateTimePicker Control	361
5.5	Binding Data to a List in a ListBox Control	365
5.6	Using a ListBox Control with Two Data Bindings	367
5.7	Binding an Array of Objects to a DataGrid Control	370

5.8	Applying an AutoFormat to a DataGrid Control	371
5.9	Using CurrencyManager Events	383
5.10	Building a Single-Table Data Form	387
5.11	Building a Multiple-Table Data Form	390
5.12	Adding a Data Connection from Server Explorer	394
5.13	Editing a SQL Server Table from Server Explorer	395
5.14	Binding a DataGrid Control to a SQL Server Table	398
5.15	Using a DataView Object to Filter Data	400
5.16	Using a Server-Side View to Filter Data	402
5.17	Using a Server-Side View to Transform Data	405
6.1	Running a Query from the Visual Studio.NET IDE	433
6.2	Running a Query from osql	434
6.3	Running a Query from the SQL Query Analyzer	436
6.4	Running a Query from a Custom Form	438
6.5	Creating a Stored Procedure from the Visual Studio .NET IDE	452
6.6	Running a Stored Procedure from Visual C# .NET	453
6.7	Running a Stored Procedure That Does Not Return Results	455
6.8	Running a Parameterized Stored Procedure	457
6.9	Retrieving a New Identity Value	460
6.10	Using the File Class to Make a Backup Copy of a File	467
6.11	Using FileStream Objects to Make a Backup Copy of a File	469
6.12	Using FileStream Objects with a Buffer	472
6.13	Using StreamWriter and StreamReader Objects	474
6.14	Using BinaryWriter and BinaryReader Objects	476
6.15	Creating a SqlConnection Object in Code	482
6.16	Using the ExecuteScalar() Method	484
6.17	Using a SqlDataReader Object	486
6.18	Filling a DataSet Object	496
6.19	Moving Through a DataSet Object	498
6.20	Designing a Strongly Typed DataSet Object	500
6.21	Building a DataSet Object That Contains Multiple DataTable Objects	502
6.22	Using the DataTable.Select() Method	506
6.23	Using a DataView Object to Sort and FilterData	509
6.24	Using a SqlDataAdapter Object to UpdateData in a Database	514
6.25	Using a SqlDataAdapter Object to Add Data to a Database	517
6.26	Using a SqlDataAdapter Object to Delete Data from a Database	519
6.27	Using a DataGrid Control to Edit Data in a Database	521
6.28	Displaying the Contents of an XML Document	530
6.29	Modifying an XML File by Using Code	533
6.30	Reading an XML Document into a DataSet Object	535
6.31	Trapping SQL Server Errors	540
6.32	Implementing Optimistic Concurrency Control	543
7.1	Invoking a Web Service	572
7.2	Creating a Web Service	575
7.3	Testing a Web Service	577

7.4	Using the Web Services Discovery Tool	583
7.5	Using the Web Services Description Language Tool	584
7.6	Testing a Web Service Without a Client Project	588
8.1	Retrieving Culture Information	606
8.2	Displaying Localized Information	609
8.3	Localizing a Form in the IDE	612
8.4	Localizing a Form with Resource Files	615
8.5	Converting Character Encodings	622
8.6	Mirroring a Form	625
8.7	Iterating with the StringInfo Class	627
9.1	Using the Windows Forms ActiveX Control Importer Tool	645
9.2	Using the Toolbox to Add an ActiveX Control to a Windows Form	648
9.3	Building a COM Dynamic Link Library (DLL)	652
9.4	Using the Type Library Importer Tool	654
9.5	Using Direct Reference with a COM Library	657
9.6	Using PInvoke with the Windows API	663
9.7	Using PInvoke with a struct Parameter	665
10.1	Creating an HTML Help 1.3 Project File	683
10.2	Building an Application That Requires User Assistance	684
10.3	Creating Help Topics in HTML Help 1.3	687
10.4	Inserting Links in HTML Help 1.3	690
10.5	Creating a Table of Contents and an Index in HTML Help 1.3	690
10.6	Compiling and Testing a Help File in HTML Help 1.3	693
10.7	Creating an HTML Help 2 Project File	697
10.8	Creating Help Topics in HTML Help 2	698
10.9	Inserting Links in HTML Help 2	700
10.10	Creating a Table of Contents and an Index in HTML Help 2	701
10.11	Compiling and Testing a Help File in HTML Help 2	704
10.12	Using the HelpProvider Component	706
10.13	Displaying Pop-up Help	708
10.14	Displaying ToolTips	709
10.15	Setting Control Properties for Accessibility	714
11.1	Printing Text	732
11.2	Printing Multiple Lines of Text	734
11.3	Printing Multiple Pages of Text	736
11.4	Printing Graphics	739
11.5	Printing Graphics Using Different Brush Types	740
11.6	Using PrintDocument Events	742
11.7	Using the PageSetupDialog, PrintDialog, and PrintPreviewDialog Components	752
11.8	Using the PrintPreviewControl Control	757
12.1	Using the Trace and Debug Classes to Display Debugging Information	786
12.2	Creating a Custom TraceListener Object	790
12.3	Using the TraceSwitch Class	795
12.4	Using Conditional Compilation	798
12.5	Trying Step-by-Step Execution of a Windows Application	804

12.6	Working with Breakpoints	806
12.7	Analyzing Program State to Resolve Errors	810
12.8	Attaching the Debugger to a Process That Is Being Executed	816
13.1	Building an Application That Needs to Be Deployed	843
13.2	Creating a Setup Project for the NetSql Project by Using the Setup Wizard	846
13.3	Using the File System Editor	854
13.4	Using the Registry Editor	857
13.5	Using the File Types Editor	858
13.6	Using the User Interface Editor	860
13.7	Using the Custom Actions Editor	862
13.8	Using the Launch Conditions Editor	864
13.9	Creating a Public/Private Key Pair by Using the Strong Name Tool (sn.exe)	870
13.10	Creating a Component with a Strong Name	871
13.11	Adding an Assembly to the GAC by Using Windows Explorer	874
13.12	Adding an Assembly to the GAC by Using the .NET Framework Configuration Tool	875
13.13	Adding an Assembly to the GAC by Using the Global Assembly Cache Tool	876
13.14	Displaying an Assembly in the Add Reference Dialog Box	878
13.15	Creating a Windows Application That Uses the RandomNumberGenerator Component	879
13.16	Creating a Merge Module Project by Using the Setup Wizard to Package a Shared Component for Deployment	885
13.17	Using a Predefined Component to Install an Event Source on a Target Computer	893
13.18	Using a Setup Project to Install Component Resources	895
13.19	Adding a Custom Action to Perform Install-Time Compilation	898
13.20	Launching a Remote Application	903
13.21	Exploring the Code Access Security Policy for a Computer	906
13.22	Setting the Runtime Security Policy for an Assembly	910
13.23	Setting the Runtime Security Policy for a Zone	913
14.1	Starting and Stopping a Process	945
14.2	Getting Process Information	950
14.3	Creating and Writing to an Event Log	957
14.4	Reading Performance Data	967
14.5	Publishing Performance Data	969
15.1	Using Dynamic Properties	996
15.2	Creating a Configured Assembly	1001
15.3	Requesting Minimum Permissions	1007
15.4	Granting Permissions by Using the .NET Framework Configuration Tool	1010
15.5	Imperative Security	1011
15.6	Using the WindowsIdentity and WindowsPrincipal Objects	1022
15.7	Verifying Role Membership	1024
15.8	Using the PrincipalPermission Class	1026
